

HYTECH

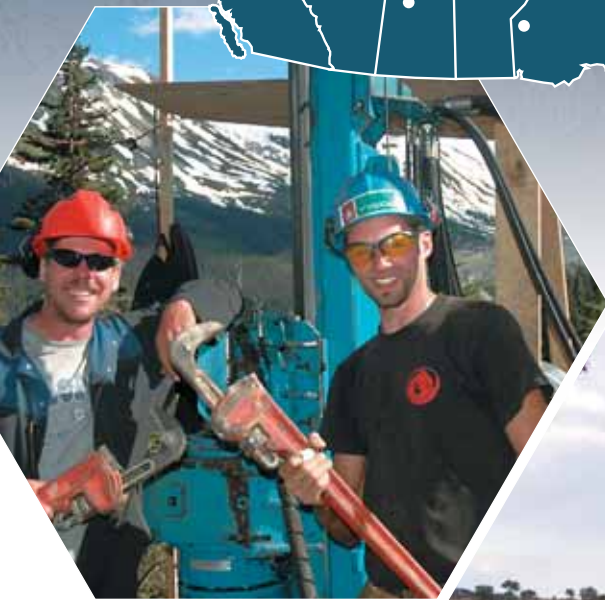

DRILLING LTD.

integrity · versatility · quality

Inaccessible remote drilling sites have created a demand for lightweight fly drills. In response to this we have built and patented our own drill equipment.

Our commitment: To provide our customers with a comprehensive drill service of the highest quality, to explore new ways to accomplish challenges others consider impossible, and to demonstrate leadership in protecting the environment.

HARVEY TREMBLAY
PRESIDENT

Hy-Tech Drilling Ltd. was incorporated in 1991. Since then we have established a solid reputation for drilling excellence in western Canada.

Our team of experienced, dedicated specialists work with clients to make certain their objectives are met. We ensure a safe workplace through drug testing, onsite safety audits, work safe training program, and weekly safety meetings.

Our patented drill design dramatically increases the working range of highly portable lightweight drills. They have been built to allow easy teardown and set up for helicopter supported jobs. Where other drills are not able to complete holes due to difficult ground, our lightweight yet heavy duty drills excel in both depth and power—proven to be economical for shallow holes, difficult ground conditions, deep drilling and underground work.

Our management adopted the ISO 9002 quality system in August of 2000. We are currently certified to the new 9001:2000 standard. This proven system has enabled us to provide superior consistent performance.

Our support system consists of:

- a fully equipped machine shop and maintenance facility in Smithers, BC
- a series of supply depots in Smithers, Saskatoon, and Red Lake
- a full complement of parts and down hole tools in our inventory
- a comprehensive maintenance program to eliminate downtime
- a satphone and high speed internet link to every job allowing quick response to field needs
- a computerized time sheet giving us up-to-the-shift costing of every job, assisting in project management.

We've built and patented our own drill equipment.

Lightweight and versatile, our drills allow easy tear-down and set-up—even in the most challenging conditions. All of our drills are Hughes 500D portable. Our technology, backed by our committed team of professionals, has made us an industry leader since 1991.
